The E-Corona platform allows a physician to remotely analyze medical records and identify a patient into one of the rehabilitation groups of patients with common problems. Professional rehabilitation instructors then conduct group physical therapy programs, group and individual psychotherapy sessions, art and occupational therapy to correct neurological and mental disorders in a remote mode. Also, the platform provides registration for PCR test, with the ability to find a link to the online record in the right-center, in the right city without unnecessary search, because if you choose correctly, the platform will provide the necessary links to the PCR test in seconds.
